

# MEWP RESCUE PLAN TOOLBOX TALK

## WHY IS A RESCUE PLAN IMPORTANT?

Planning is critical to a prompt rescue of someone who has become trapped and timing can make a very significant difference to the injuries sustained – in some cases, the difference between life and death.

## WHAT IS A RESCUE PLAN?

A rescue plan is a plan to retrieve the mobile elevating work platform (MEWP) occupants in case of malfunction or emergency:

- MEWP stopped due to no fuel or low battery;
- MEWP malfunction;
- Snagged or trapped platform;
- Platform overload;
- Operator/occupant distress;
- Other emergencies.

## WHEN IS A RESCUE PLAN NEEDED?

Health & Safety regulations require all employers to provide a workplace safe from harm. A MEWP-specific safe-use plan should include a rescue plan that is communicated before any person operates a MEWP at height. **Read and rehearse the rescue plan BEFORE you need it.**

## WHAT ARE SOME OF THE FACTORS TO CONSIDER WHILE DESIGNING THE RESCUE PLAN?

- Who will be in the vicinity if a rescue is needed?
- Are ground rescue personnel familiarized and competent in the rescue process? Do they know how to use the ground controls, the auxiliary and emergency descent systems?

## WHO NEEDS TO KNOW?

This toolbox talk applies to:

- User (who has control of the use of the MEWP on site);
- Site managers and supervisors where MEWPs are in use;
- MEWP operators/occupants;
- Nominated ground rescue person.

- How will you communicate with the MEWP operator when the platform is elevated?
- Can the MEWP operator operate the platform controls?

## WHAT TO DO NEXT

Brief all personnel on the rescue plan and practice the emergency procedures.

### The user must:

- Lead the rescue or nominate in the rescue plan, a ground rescue person that is familiarized and competent with the MEWP;
- Keep the plan readily available and visible;
- Conduct periodic reviews of the rescue plan to check for changes in the worksite, operations, etc.;
- PRACTICE the plan regularly.

### The nominated ground rescue person must be:

- Familiarized with the ground and auxiliary descent systems of all the MEWPs covered in the rescue plan;
- Available to conduct rescue whenever MEWPs are in operation.

## REMEMBER

**If the rescue plan is not practiced it could fail**
