Why Safety is So Much More
than You Think It Is.

The New OSHA VPP Core Elements

New VPP Core Elements

- **Management Leadership:** If you lead an organization, you have to lead and support safety.
- **Worker Participation:** Using workers in the process is the magic pixie dust.
- **Hazard Identification and Assessment:** Hazards have to be identified and assessed. This becomes an important part of the framework.

New VPP Core Elements

- **Hazard Prevention and Control:** The goal of a safety & health management system is to prevent and control hazards.
- **Education and Training:** Training is where we default to.
- **Program Evaluation and Improvement:** The S&H management system is not static and constant improvement is how we got where we are.

New VPP Core Elements

- **Communication and Coordination for Host Employers, Contractors, and Staffing Agencies:** Outside employers and new or temporary employees increase risk. Contractors should be thoroughly vetted before contracting with them.
